DETAILED ACTION

1. Claims 4 and 21-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Use of "preferably" in claim 4 is indefinite.

2. Claims 1-4, 21-35 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

It is not clear where the phrase "to enable a desired flow through the first layer for discharge through said selected parts of the second layer" is supported in the original specification of the PCT filing that forms the basis for the filing date of the instant national stage application.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-4 and 21-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Strong (U.S. 4,286,002) in view of Jackson (U.S. 4,280,487).

Strong teaches a fabric type absorbent layer between a slit or perforated cover sheet and an impermeable back sheet for use under a bed ridden patient (abstract, col. 2, lines 5-10).

Jackson teaches circulation of air through a space formed by an impermeable back layer and a perforated top layer to provide fresh air to a bed ridden patient (abstract, Figure 2). The instant invention claims two layers with a middle fabric layer with the upper layer perforated to allow air flow. It would have been obvious to one of ordinary skill in the art to adjust the size and placement of the holes in the perforated layer of Strong in order to allow air circulation to prevent bed sores because of the teachings of Jackson.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Strong (U.S. 4,286,002).

See the above rejection for the features of the reference.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Neu teaches air circulation in a fabric layer.
